Refenti Apartments

Service Provided - Design and Build

9-13m spans 22 cm flat slab with drop cap, maximized parking spaces

Location

Bulbula

Project Size

31,000 m²

Category

Mixed Use

Status

Completed

Elilta Real Estate

Service Provided

Connected two towers 33 meters apart and 70 meters above the ground using Post-Tension technology and a Hollow-Core system to create open space and modern solutions. One of the most challenging tasks was supporting the 19th-floor slab from the fifth floor with over 40 meters of scaffolding. All formwork, concrete, and rebar work for the penthouse slabs were executed by EASE, utilizing a hollow-core system to reduce weight, a distinctive and efficient construction method.
